

At ABSOLUTE we take your hydrocarbon contaminated asset, and we return it to you clean...normally within a few hours. ABSOLUTE'S unique process, starts with our proprietary organic solvent selected over years of testing.

Our specially designed mechanized equipment allows for full submersion of the asset. This allows our organic solvent to contact all surfaces particularly those surfaces that are difficult reach. Our process eliminates the risk of damage due to conventional high pressure water cleaning. Our organic solvent binds to the molecules of hydrocarbon

SPECIFICATIONS

10'L x 6'W x 5'H tank to submerge hydrocarbon contaminated assets

***custom tank sizes are available**

Safe for seals, gaskets and electronics

Accommodates virtually all sizes of process equipment and oil field tools: pumps, valves, pigs, smart pigs, drilling equipment, scaffolding and other assets

BENEFITS

- **Cleaning completed in hours rather than days**
- **Fully mechanized to reduce or eliminate risk of operator injury and damage to assets**
- **Consumes no water and requires no deep-well disposal unlike traditional water blast cleaning**
- **Full submersion of asset allows 100% contact with all surface areas and deep clean to the core**

VALUE ADDED SERVICE

ABSOLUTE can custom fabricate a commercial cleaning system for your particular needs.

Keep it on your site and we will attend regularly to monitor the equipment and the solvent to ensure constant optimum performance.

RESULTS

DID YOU KNOW?

In 2 months our customers will save over **2 million litres of water** in total using our Absolute technology to clean their hydrocarbon fouled heat exchangers.
